

I strongly support Net Neutrality and the FCC should as well. Giving more power to a few corporations is not a constructive action in our pursuit of democracy and freedom. Net Neutrality maintains boundaries between conflicts of interest and prevents a litany of back-handed monopolies. If the proposed actions are passed, there will be limits placed on free speech almost immediately.

This issue will deeply influence the way our culture develops over the next decades and could mark a turning point, either for better or for worse. Constriction of information and access is not the future any of us would like to see, except for a few very wealthy people.

Please do not let them take this from us!!
